

Service Plans: Applications

ISE's methodology focuses on assets and adversaries in order to best harden systems. Understanding that not all assets, adversaries or systems should be treated the same, ISE accordingly offers varied service plans. These tiered offerings are scaled to meet the profile of needs for a given system.

The below checklist helps our customers determine the best evaluation tier with which to proceed.

- See below to map the characteristics of your system to the most appropriate assessment tier.
- See reverse for the services that are included with each assessment tier.

SYSTEM CHARACTERISTICS	TIER III	TIER II	TIER I
ASSET VALUE			
Low	✓	✓	✓
Medium		✓	✓
Hugh			✓
ATTACK TYPE			
Untargeted attacks	✓	✓	✓
Targeted attacks		✓	✓
Advanced attacks			✓
Insider attacks			✓
ADVERSARY SKILL			
Low	✓	✓	✓
Medium		✓	✓
High			✓
ADVERSARY TYPE			
Casual Hacker	✓	✓	✓
Hacktivists		✓	✓
Organized Crime			✓
Nation State			✓
ATTACK SURFACES			
Internet hosted services	✓	✓	✓
Client-server communications	✓	✓	✓
User-accessible services		✓	✓
Client-side vulnerabilities		✓	✓
Mobile devices		✓	✓
Back-end systems			✓
Back-end networks			✓
Custom deployments			✓
Data centers			✓

Tier III: Best suited for scenarios involving low value assets and low skill adversaries. Scope focuses primarily on known attacks against the front-end.

Tier II: Best suited for systems that access medium-to-high value assets and/or are targeted by medium-to-high sophistication adversaries.

Tier I: Best suited for critical systems that access high value assets or are targeted by sophisticated adversaries. This level of review considers entire system scope, including the back-end and possibly source code.

ASSESSMENT DELIVERABLES	TIER III	TIER II	TIER I
SCOPE			
Front-end	✓	✓	✓
Back-end			✓
ASSESSMENT TASKS
